PROFESSIONAL SUMMARY

Flutter developer building cross-platform mobile applications for iOS and Android. I work in Clean Architecture with BLoC and Riverpod, and design offline-first — local SQLite persistence with REST and Firebase synchronization — so applications stay usable when the network does not. I take work through the full release lifecycle, from architecture to App Store review and post-launch maintenance. Computer science foundation from 1337 Coding School (42 Network).

TECHNICAL SKILLS

Mobile Development: Flutter, Dart, iOS, Android, Cross-Platform Architecture, App Store Connect, Google Play Console

State Management: BLoC, Riverpod, Provider

Architecture: Clean Architecture, MVVM, Repository Pattern, SOLID Principles, Offline-First Design

Backend & Data: Firebase (Auth, Firestore, Storage, FCM), REST APIs, SQLite, Hive, PostgreSQL, Node.js, Google Gemini API

Tools & Workflow: Git/GitHub, Docker, Xcode, Android Studio, Agile/Scrum · **Other Languages:** C, C++, TypeScript, React

PUBLISHED APPLICATIONS

Tomato: AI Pomodoro Timer / *Flutter — Live on the App Store* 2025 – Present

- Designed, built, and published a focus and time-blocking productivity app to the Apple App Store, handling the full lifecycle from architecture through review, release, and post-launch updates.
- Integrated Google Gemini to generate personalized productivity coaching from a user's own focus session history, task data, and daily goals.
- Implemented background-resilient timers using background task handling and OS-level local notifications, keeping sessions accurate while the app is suspended.
- Modelled focus, break, and task state transitions as explicit BLoC events, keeping timer logic testable and decoupled from the UI.

SealX Manager / *Flutter — Live on the App Store* 2025 – Present

- Built and published a privacy-first local media manager and offline video player for iOS, storing all user media inside the app sandbox with no cloud upload.
- Tuned video player buffering and cache sizing to keep high-bitrate local playback smooth without dropped frames.
- Structured the app with MVVM and Riverpod, and optimized the shipped bundle to 26 MB.

SELECTED PROJECTS

Offline-First Task Management Suite / *Flutter, SQLite, BLoC*

- Built a task organizer that remains fully usable with no connectivity, using a local SQLite schema with indexed queries and local notifications that survive device reboots.

E-Commerce Mobile Platform / *Flutter, Firebase, Clean Architecture*

- Developed a cross-platform retail app with Firebase authentication and Firestore order storage, placing data sources behind repository interfaces so the data layer can be mocked in tests.

FatigueVision — Driver Safety System / *Flutter, Google ML Kit, DDD*

- Built a real-time driver drowsiness detector running fully on-device, computing eye aspect ratio from ML Kit face mesh landmarks to trigger immediate audio and haptic alerts.

EDUCATION

1337 Coding School (42 Network) / *Computer Science* 2024 – 2026
